WELCOME TO OUR OFFICE

We Provide comprehensive patient care in all phases of non-surgical and surgical endodontics. Endodontics, or "root canal therapy", is one of the dental specialties recognized by the American Dental Association and is the only type of treatment we perform. You have been referred to our office because your dentist believes your present condition requires the services of an endodontic specialist.

What is an Endodontist?

An endodontist is a dentist with advanced training of the diseased, damaged pulp, or soft inner tissues of your teeth. Endodontists spend at least two years after dental school training to become specialists in the techniques and procedures involved in diagnosing and treating dental problems that originate inside your teeth. In practice they only perform endodontic procedures and therefore have extensive experience in this area.
